# RABBIT TOKEN

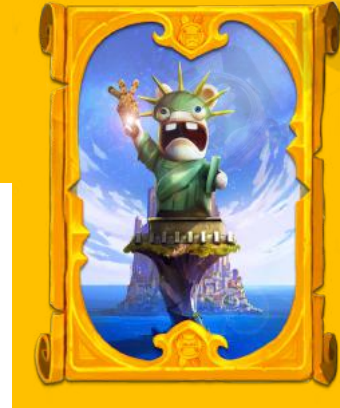

## Fun!

Grab and collect all the Rabbit Tokens!

## A good cause!

Integration of defi and NFT innovative play, and committed to charity

**RABBIT is a community-driven DEFI+NFT blind box card game platform based on animation and developed on the BSC chain. It uses token rewards to increase user participation and entertainment. The integration of a revolutionary token economic system with the use of financial mechanisms and game systems will empower participants and enable a truly decentralized game.**

All blind box cards are drawn randomly, and each participant draws blind boxes with tokens to obtain rare blind box cards of different levels. RabbitNFT allows fans, collectors and enthusiasts to collect different levels of Blindbox cards to form a limited-edition special card. For special card holders, they can mine at the corresponding level of mining pools to obtain income. It also uses VR / naked eye 3D technology to create a new NFT and physical delivery of gold and silver custom-made rabbits and other limited peripheral gifts NFT, which enables more novel experiences and value preservation.

## Rabbids Heroes

The Mad Rabbit Heroes is a mobile platform NFT card game. Many gameplay designs draw on the creativity of Hearthstone. Players need to collect a variety of NFT cards in the game and use the cards to apply various skills to help the mad rabbit destroy the enemies in front.

With more than 500+ NFT card pools, brand-new professions and hero skills will be gradually unlocked through battles. Players with DOT, ETH, and BSC camps have an ultimate goal to let the mad rabbits eliminate all enemies, win the world ranking, and achieve Earn money in the fun game, and finally fly to the moon.

## RABBIT increases the liquidity of NFT cards through liquidity mining

NFT + DEFI combines NFT cards and TOKEN through a combination of LP mining. Different levels of cards correspond to different levels of mining pools. If miners want to obtain higher returns, there are three ways to obtain different levels of NFT card:

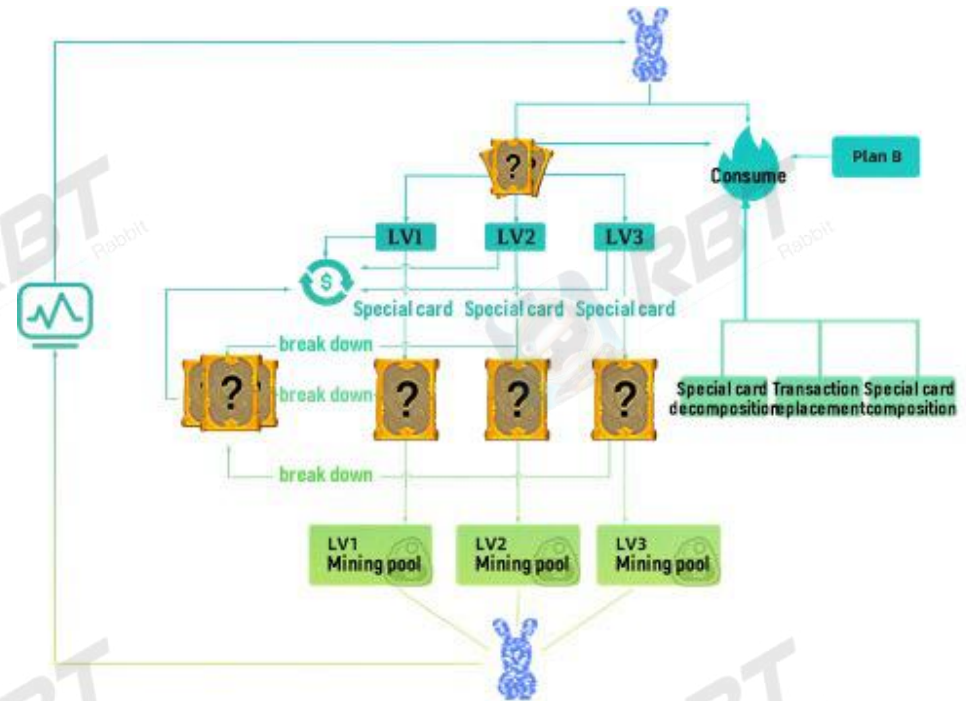

- 01 Blind box random selection
- 02 Purchase cards drawn by other users in the trading market
- 03 Replace with cards of the same level

- ◆ Users can set the limit order price of any NFT Token ID in the trading market. Buyers get NFT Token by paying corresponding tokens

# Economic model

- ◆ Participants can use RabbitNFT Token to draw blind box cards. All cards are drawn randomly (including high-level cards). Blind box cards can be sold through the trading market or can be exchanged with other enthusiasts at the same level in the card exchange market.
- ◆ Cards of the same level can also be formed into special cards, and special sets of cards can be combined through LP to obtain income from mining in the corresponding open mining pool.
- ◆ If you don't want to participate in mining, pay a certain fee to decompose the special set of cards into single cards of the same level, which can be used for collection or sold in the trading market in exchange for the corresponding income.

## Miners' income

Miners who want to obtain income from the mining pools of different levels need to have NFT cards of the same level to form special cards of the same level to participate in mining pools of the corresponding level. There are only three ways for miners to quickly obtain NFT cards:

- 01 Blind box random selection
- 02 Purchase cards drawn by other users in the trading market
- 03 Replace with cards of the same level

- ◆ This will increase the circulation of NFT cards and increase the value of NFT cards in the hands of the collectors. The increase in card value will also increase the consumption speed of blind boxes. At the same time, CTO will get a good use and consumption.

## Double insurance mechanism

In order to prevent when the price  $C$  rises, the mining pool output  $A$  remains unchanged, and the LP combination value  $TP$  does not change (the NFT limited number of cards are all drawn out)  $(C \cdot A) / TP = R$  (rate of return)  $LP = \text{NFT} + \text{Token}$  to prevent high-level The card is monopolized by the giant whale account, and a small number of users enjoy the mining revenue exclusively. When the blind box card stock rate is less than 10%, by increasing the number of LP participants, a new series of NFT gift physical delivery blind boxes will be issued, and the number of miners in the mining pool will be increased to allow more participants to share the pool's income.

## Prophecy machine

**RabbtNFT** uses the oracle application to ensure the fairness of each participant and provide all participants with a fair and equitable dual insurance mechanism.

## Roadmap

---

- 2019:** Coming out
- Q3 2020:** Start game production
- Q2 2021:** Token economy
- Q2 2021:** Start mining
- Q3 2021:** Open NFT blind box
- Q4 2021:** Charitable donation
- Q1 2022:** Launch the Rabbit Hero NFT game

## Plan B Creator Plan

The RabbitNFT team supports the release of works by NFT enthusiasts and believes that all good things, as long as they exist, will be valuable.

Because they are being recognized and recognition is a manifestation of value. Therefore everyone has the right to record and share beautiful things, whether it's music, pictures, codes, designs, trendy works, etc., They can all be recorded and shared with everyone who wants to own them. The value of the item is obtained through various methods such as gifting, auctioning, and selling.

## RABBIT Charity Foundation

We will support and help the good wishes of fans in each community. After collecting the wishes and matters that need help from fans every month, the community will carry out voting activities. Each fan uses RBT to make donations. For the votes ranked first, we will repurchase 10% of the same amount of tokens for repurchase and destruction. Then we will complete the first ranked wish from the fans in an open and transparent environment. All tokens that are not ranked first will be returned. While waiting for the statistical results, the tokens will automatically enter the liquid pool for mining.

## GameFi

### Next Generation Gaming : Free to Play to Earn (F2P2E)

RABBIT has established a unique infrastructure that builds on the growing **DeFi ecosystem** and **combines it with Gaming** through unique NFTs. Using Liquidity Pools, Yield Farming, and NFTs, the GameFi infrastructure will not only find the best yield strategies for users but also generate unique NFTs that can be used across a multitude of games. This gives RABBIT users the unique ability to **play for free and to earn** in one stopshop.

## Crates

With the goal of providing the best returns for liquidity providers, RABBIT Crates are a set of optimized yield farming Smart Contracts that automatically seek the best yield for users. RABBIT currently supports 4 single token strategies and 8 LP token strategies.

Type	Deposit Token	How to obtain	Strategy
Single	BUSD	Deposit BUSD	Venus
Single	USDT	Deposit USDT	Venus
Single	USDC	Deposit USDC	Venus
Single	BNB	Deposit BNB	Venus
LP	RABBIT-BNB	Deposit LP from Pancake RABBIT-BNB	PancakeSwap
LP	ETH-BNB	Deposit LP from Pancake ETH-BNB	PancakeSwap
LP	BUSD-BNB	Deposit LP from Pancake BUSD-BNB	PancakeSwap
LP	USDT-BNB	Deposit LP from Pancake USDT-BNB	PancakeSwap
LP	BUSD-USDT	Deposit LP from Pancake BUSD-USDT	PancakeSwap
LP	DAI-BUSD	Deposit LP from Pancake DAI-BUSD	PancakeSwap
LP	USDC-BUSD	Deposit LP from Pancake USDC-BUSD	PancakeSwap
LP	BTC-BNB	Deposit LP from Pancake BTC-BNB	PancakeSwap

- ◆ Crate contracts use an optimal auto-compounding strategy to provide users with the best yield possible.

Liquidity Time	Withdraw Fee
7 days or less	0.50%
8 - 14 days	0.40%
15 - 30 days	0.30%
31 - 90 days	0.20%
91 - 180 days	0.10%
More than 181 days	0%

## Fees

Performance Fee (Auto Buyback and Burn) on earnings: 4%  
Platform Fee on earnings: 1%

### Tiered Withdrawl Fee :

Your tokens can be withdrawn from CRATE contracts at anytime. To prevent bad actors from damaging the system, Crate contracts have a tiered withdrawal fee depending on how long liquidity has been provided for.

## RABBIT DAO Token

Description	Details
Token Name:	RABBIT
Protocol :	BSC
Standard :	BEP20
Total Supply :	100,000,000,000

RABBIT Tokens will be distributed over 5 years according to the below schedule:

Year	Weight	Amount (RABBIT)
1	20.00%	10,000,000,000
2	11.25%	5,625,000,000
3	8.75%	4,375,000,000
4	6.25%	3,125,000,000
5	3.75%	1,875,000,000
Total	50%	50,000,000,000

## Governance

RABBIT Token hodlers have the right to submit and vote on proposals. Hodlers will be able to manage the success of the platform such as games to develop and integrate, unique functions, events, development and more.

---

## Staking

Game theory motivates token hodlers to react in honest ways to achieve optimal payoff. Ensuring that good actors are rewarded. By staking RABBIT tokens, this establishes a mechanism to ensure users, developers, artists, and platform act as an entity for success.

---

## Gamified Rewards

Through the use of gamification techniques, stakeholders will be rewarded through the enjoyment of the RABBIT platform, creating a self-sustaining system for community expansion

# RBT
